Introducing Gravity Assisted Power

Feltenberger Pendulum Pump GP210

General Purpose Piston Pump

Gravitational Energy Corporation (GEC), a manufacturer of an innovative technology called Gravity Assisted Power (GAP), has developed the hand-operated Feltenberger Pendulum Pump, US Patent No. 7,735,386 and US Patent pending. The Feltenberger Pendulum is a double-reciprocating pendulum, which uses the force of gravity to help provide the input power to operate various types of machinery. This technology reduces fatigue during operation to about 1/5th that of other systems tested.

Stunning in its simplicity, utility and productivity, the first commercially available GAP machine, a general piston pump, is called the GP210. It provides four different pressure/volume settings for a wide range of pumping capability. Specifically designed to pump surface water by suctioning, the GP210 can lift water approximately 25 feet from the water source to the pump.

Combined with optional Aquathin filtration and reverse osmosis systems, the Feltenberger Pendulum pump becomes a complete hand-operated water treatment facility capable of producing 1,000 gallons per hour of safe drinking water with no added chemicals or UV radiation. Virtually any type of contaminated source water can be filtered to meet World Health Organization standards for safe drinking water. Assembly, testing and shipping all occur at the company factory in Cuyahoga Falls, Ohio. GEC with its subcontracted manufacturers provide a current manufacturing capacity of over 100 machines per week. All components of the device are proudly "Made in the USA".

Pictured with optional trailer & Aquathin filtration system

If operated continuously, one GP210 machine can provide the drinking water needs for approximately 20,000 people per day at a liberal standard of one gallon per day per person. There is no other hand-operated pumping system that can come even close to these numbers.

Gravitational Energy brings to the world a remarkable technology and sustainable energy source, gravity assisted power. In areas where no electricity or fuels are available, Gravity Assisted Power can be the answer. Let gravity help you do the work!
